Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

**Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

**Penetration time of glove material**

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

**Eye protection:** Goggles recommended during refilling

*(Raphanus sativus).*

The addition of 0.2% on dry weight of Pura Multiprimer to soil had no negative effect on the germination and growth of barley, cress and radish. The germination and plant bio mass

yield in the test soil amounted to over 90% of these in the test soil. For barley and radish, no negative effect was observed up to a concentration of 1% and 0.5% respectively. The NOEC (No Observed Effect Concentration) on 0.2% at dry weight equal an 0.3% concentration on wet weight.
